This is done by a variety of countermeasures, such as armour plating and reactive defences, as well as more complex ones such as heat-emissions reduction. Donohue, of the British Army's Mechanical Transport Committee, suggested fixing a gun and armoured shield on a British type of track-driven vehicle. To the above can be added unit communications systems and electronic anti-tank. Conversely, tanks can spearhead attacks when infantry are deployed in personnel carriers. During World War II the first conflict in which armoured vehicles were critical to battlefield success, the tank and related tactics developed rapidly. A 'manpack' radio is a high-power radio designed to be carried by an individual on foot. Items can be controlled as either military or dual-use items. The internal controls how and when to remove these template messages. In Hungarian the tank is called harckocsi combat wagon albeit tank is also common.
