Transportation and energy sectors face a common concern: electricity Batteries (for stationary and mobile applications) will represent more than 50% for the vehicle propulsion, lighting, cooling or heating, braking systems With regards to sustainable development, hydrogen appears to be a clean energy: a fuel cell.

Silicon as an intermediary between renewable energy and hydrogen Frankfurt, Germany: Research on fuel-cell and related technologies is being carried out in several developing countries, e. A PCM is a material with a high heat of fusion. It is envisaged that Overarching projects will be supported by the FCH2JU to

Commercial air conditioning systems are the biggest contributors to peak electrical loads. India too is rolling out hydrogen-fueled two- and three-wheeler vehicles, while at the same time exploring ways of tapping hydrogen for stationary power. For EU countries in particular, hydrogen and fuel cells have received increased attention in order to meet policy objectives at the EU or member state level. This platform has been a major instrument for steering EU efforts in this field. fuel-cell is a range extender:
