We need to distinguish different classes of scenarios involving societal collapse. The view is also consistent with denying any strong version of inevitability of the particular growth pattern observed in human history.

Yet it is important to attempt as best we can to distinguish futuristic scenarios.

A recurrent collapse scenario consequently requires a carefully calibrated homeostatic mechanism that keeps the level of civilization confined within a relatively narrow interval, as illustrated in figure 1. Such improvements would make it possible to create faster-thinking uploads, running perhaps at speeds thousands or millions times that of an organic brain.

First, how does enough unwillingness arise to overcome what at the present time might be traps that we are walking towards that we could only avoid falling into by means of foresight. Over long time scales, the compound effects of even modest average annual growth are profound.
