The level and effects of CO₂ emissions are currently believed to be broadly the same regardless Aviation and Climate Change altitude i. Continued growth in both frequent flying practices and concern over air travel's climate impacts are in a dynamic relationship and the question of whether one or the other will reach a tipping point cannot yet be determined. All these extreme situations will have strong negative impacts on all forms of transport, including aviation.
The grant will also be used to research how the fuels affect engine durability
grant will also be used to research how the fuels affect engine durability and quality control standards. The general warming trend and increase of moisture in some latitude bands, with a more active dynamic of the flow, all point to an increased chance of occurrences of conditions favourable to icing.
