Intermediate Why are the WHEN PLANETS COLLIDE and Sun sometimes orange or red? Blue stragglers are common in the dense environments of globular clusters, and demonstrate that even long after all the stars as massive as the Sun have burned out, we will still create new ones simply by gravitational mergers.

Any collisions between planets happened early in the Solar System, and they

Intermediate What is the difference between the "Doppler" redshift and the "gravitational" or "cosmological" redshift? Together with Caltech astronomer Michael Muno, the research team was surprised to discover that what they initially assumed to be a young star, was in fact hundreds of millions years old.

The giant impact hypothesis has been thoroughly validated by a number of lines

What is the difference between the "Doppler" redshift and the "gravitational" or "cosmological" redshift?
