Humans are constantly creating molecular configurations that are either clones or new molecular configurations. When our host star dies... Earth will die with it... and so is everything else in our solar system... This is also an event you want to survive by not being around when it happens. It is also so safe to be a child.

That would be a slow path to colonization! Interstellar visitors could be... We call it the speed of light – about miles per second – because we first noticed this phenomenon by studying the properties of light, but it is a hard upper limit on all relative speeds. But how odd that on Earth life is everywhere, in such profusion, from the stratosphere to deep ocean trenches, Antarctica, sulfur springs and hot cracks in the mantle. Perhaps the object is a bit of both, artificial and natural. I agree with your point of Mars being a dumb alternative... its really no solution and i always felt this way... Mars didnt die out for no reason.
