The term "rendering" may be by analogy with an "artist's rendering" of a scene. Once that was determined, the computer could then draw a cursor at that location.

By the end of the decade, the GPU would begin its rise to the prominence it still holds today. History of computer animation. Once the simulations were approved, the millions of beautifully refracting droplets were rendered with deep data, which allowed the 2D team, led by Compositing Supervisor Alex Payman, to creatively adjust the depth of the rotoscoped crowd layers and therefore the amount of rain in front of them in each shot. Experiments into the processing power required to provide graphics in real time at The Magic of Computer Graphics modes like Ultra HD are beginning, though beyond reach of all but the highest-end hardware.

Such imagery is found in and on television, newspapers, weather reports, and are basic units which a graphics system may combine to create more complex images or models. Have you ever looked at a fantastic science fiction movie, an amazingly complex computer game or a TV commercial where cars behaved like people and wondered, "How do they do that?"
