Hayward MW Prey preferences of the spotted hyaena *Crocuta crocuta* and degree of dietary overlap with the lion *Panthera leo*. This is consistent with previous findings suggesting that female lion home range size was constrained by the abundance of kudu in the early dry season [40]. I thought this was a good book for several reasons; the way the research was conducted, the presentation of the research, the organisation of the book and the tone and writing of the author all made it a pleasant read. MagentaBat5BatDetector5. It didn't claim to be an ultimate guide on everything you need to know about lions even though there was a lot of information on them like many other books on animals, instead it focused on answering a specific question and in the process discussed in detail the lives of the lions in the area: It was not possible to quantify biomass rigorously from faecal samples, as prey age and sex were not discernible from hair remains. ColinrateditlikeditApr15, For kill data, we reported the relative contribution of each prey age class per season.

Carnivore diet from scat analysis and GPS telemetry methods.
