It is useful to see what the jobs gap looks like by race and Latino ethnicity. Conversely, 3D printing, resource-efficient sustainable production and robotics are all seen as strong drivers of employment growth in the Architecture and Engineering job family, in light of a continued and fast-growing need for skilled technicians and specialists to create and manage advanced and automated production systems. Conversely, our respondents share a stark premonition that increasing geographic mobility is a reality. Self-driving cars that drive themselves, machines that read X-rays, and algorithms that respond to customer-service inquiries are all manifestations of powerful new forms of automation. Jobs deficit relative to our analysis shows that most job growth in the United States and other advanced economies is rich, but its economy is projected to grow slowly to Jobs related to developing and deploying new technologies may also grow.
